Prepared exclusively for:

HOUSING AND COMMUNITY DEVELOPMENT CORPORATION OF HAWAII

May 2001

The Kuhio Park Terrace housing complex consists of two apartments and several low-rise buildings and is home to approximately 614 families. This needs assessment study of Kuhio Park Terrace (KPT) residents was conducted to assist the Housing and Community Development Corporation of Hawaii (HCDCH) in preparing its application to the U.S. Dept. of Housing and Urban Development (HUD) for HOPE VI funds to modernize this facility. The Community and Supportive Services (CSS) component of the HOPE VI program encompasses activities designed to promote upward mobility, self-sufficiency and improved quality of life for the residents of the public housing project, including literacy training, job training, day care, transportation and economic development opportunities. This phase represents the first in a two-phase study, in which interviews were conducted with a sample of non-profit providers currently serving the residents of KPT regarding the perceived need for supportive service programs. The second phase will include a report on the profile of public housing residents, as well as their perceived needs or interests. Key findings were as follows:

Cultural isolation was the major underlying issue resulting in more apparent social problems. The majority of service providers noted that Samoans comprised the largest ethnic group at KPT, with particular cultural nuances that served as barriers to self-sufficiency. Specific elements of culture cited were: a level of comfort with government entitlements as a way of life, subsequent lack of interest in entrepreneurship leading to financial independence. In addition, KPT has replaced the traditional village as Samoan families attribute some measure of pride and to living in the same place, raising their children and sending them to school in the same place that they themselves attended. This reflects a sense that the housing complex has come to represent their family heritage rather than a temporary dwelling place. Without addressing these issues of culture and multi-generation history, addressing specific conditions were viewed as merely addressing symptoms rather than providing permanent solutions.

Specific obstacles to self-sufficiency were: lack of English-speaking skills, lack of education or job skills and substance abuse. The majority of service providers agreed that these were the three biggest barriers to self-sufficiency for residents at KPT. They also agreed that these were merely symptoms of the isolation that residents felt from mainstream society. As such, these programs need to be executed with consideration to the

various ethnic groups who participate in these programs. Learning English was the first and biggest hurdle that residents needed to overcome, according to providers, so that they could communicate with their employers. Lack of education and job skills was the second biggest barrier mentioned most often by providers, since many residents were accustomed to government entitlements and never had any work experience. Substance abuse was also cited often by providers, reflecting despair at their lack of connection with the larger community and therefore perceived lack of access to economic opportunities.

The most effective programs to address these needs were: job training, child development and recovery programs (e.g. 12-step). Providers reported some success with job training programs, particularly those emphasizing hands-on learning, mentoring and peer-to-peer counseling. Child development was favored by providers who preferred a long-term perspective --- focusing on prevention rather than attempt a cure --- to wean the next generation off government entitlements. For some, 12-step programs were viewed as very effective, as long as residents had access to programs outside their own neighborhoods. Again, one-on-one encouragement from a liaison who blended in with the community and obtained widespread buy-in was seen as the ideal situation. (While specific cultural awareness activities were mentioned, all of the previously mentioned programs were assumed to include culturally sensitive components.)

The least effective program for this population was entrepreneurship. Some providers who had worked closely with KPT residents felt that entrepreneurship programs served those who had an appreciation for capitalism and individual achievement. Because the majority of residents at KPT come from Samoa, whose government takes care of its residents' basic needs, these providers felt that they did not have the experience nor the orientation toward creating a business that would propel them to self-sufficiency.

The most pressing needs for youth were adult-involved activities, peer-to-peer counseling and social skills. The majority of providers were unanimous in saying that what the youth at KPT needed most were activities to occupy their time productively. Activities mentioned include sports, games and videos. Likewise, a number of providers echoed the opinion that the most effective way to reach youth was to enlist young people like

themselves to talk about the benefits of completing their education. At least one provider said that exposure to a wide range of experiences was needed to develop the youths' social skills.

Residents have become cynical over the lack of resolution to their expressed needs. Non-profit issues affecting KPT residents include: competition and "turf battles" among organizations, lack of funding for a central assessment and case management facility or personnel, and the question of whether low usage is the result of bureaucracy or misuse of existing resources. While residents may not be directly aware of these challenges, some providers said that residents receive news of fact-finding projects or promises of improvement with cynicism because they have not witnessed what one provider called, "a beginning, a middle, and an end" to the issues they present.

DISCUSSION GUIDE 31

OBJECTIVES

This needs assessment study of Kuhio Park Terrace (KPT) residents was conducted to assist the Housing and Community Development Corporation of Hawaii (HCDCH) in preparing its application to the U.S. Dept. of Housing and Urban Development (HUD) for HOPE VI funds to modernize Kuhio Park Terrace. The Community and Supportive Services (CSS) component of the HOPE VI program encompasses activities designed to promote upward mobility, self-sufficiency and improved quality of life for the residents of the public housing project, including literacy training, job training, day care, transportation and economic development opportunities. Specific areas of discussion were:

- major obstacles to improving residents' quality of life
- most pressing needs
- most pressing needs specific to youth residents (broadly defined as those aged between 7 and 17 years old)
- most effective and least effective programs
- new programs in development

METHODOLOGY

MTP President Wanda Kakugawa conducted person-to-person interviews and telephone surveys with those providing services to the population of Kuhio Park Terrace (KPT) from a list provided by HCDCH. The complete list of respondents and survey form are included in the Appendix. A discussion guide was designed by MTP and reviewed by HCDCH prior to the interview. Because of the varied areas of expertise of respondents, the guide features open-ended questions to allow the interviewer the flexibility to explore and/or elaborate further on issues raised that may not have been included in the outline. A copy of the discussion guide is included in the Appendix of this report. The findings are documented on a not-for-attribution basis in order to conduct more straightforward and more purposeful dialogue with providers.

NARRATIVE OF FINDINGS

Service providers were asked, "Based on your experience with KPT residents, what are the most important areas of concern or issues facing these residents? In other words, what are the major barriers to self-sufficiency and a better quality of life?" Like most social conditions, providers felt that residents at KPT were dealing with underlying issues that then resulted in specific social problems.

Underlying issues were related to culture and limited assimilation into mainstream living. Because half of the residents at KPT were originally from American or Western Samoa, most service providers focused on the culture in this region. Many said that because this area is a U.S. protectorate with no viable economy of its own, its people are conditioned to expecting the government to provide for its basic needs. Thus, being on welfare does not carry the same stigma that it does in Hawaii or on the mainland U.S. This, in turn, has resulted in generations of families being raised, growing up and then raising families of their own within KPT. This has created a substitute for the village lifestyle that is common in Samoa, where multiple generations live with or near each other, and everyone knows everyone else. The difference is that there is no subsistence economy (e.g. farming) to sustain the family- and village-oriented lifestyle at KPT, which then results in economic hardships and more serious physical, mental and emotional conditions.

Specific obstacles pertain to the results of cultural isolation. The majority of providers mentioned economic hardships resulting from unemployment or underemployment, lack of English-speaking skills, substance abuse and domestic violence.

These two areas are discussed in greater detail in the following section.

UNDERLYING ISSUES

Culture and history emerged as the most prominent root cause of obstacles to self-sufficiency. The specific elements of culture mentioned by service providers were:

- Expectation of government as permanent service provider. Most service providers mentioned that, as a U.S. protectorate, the Samoan government functions very much like a socialist state, in which it provides most of its citizens' basic needs. Thus, being on welfare is not seen as a source of shame, but rather an entitlement.

  Selected comments:

  "American Samoa has been a social welfare state created by the U.S. government since 1898 so that they are not responsible to pay for anything, whether it's health care, taxes, water, electricity, phones, roads or anything that we need to in Hawaii. So they come without the expectation of helping to cover the cost of those services. So they simply don't come with the framework of (1) getting a job and (2) becoming self-supporting, not being assisted by the government."

  "They've become accustomed to having that support system there for them so it's very difficult for a lot of our families to get out of it. It's like, 'Why work when I can get minimum wage, welfare, medical and all that?' They can't get past it."

  "Everything that's out there, they expect to have as a right instead of a privilege, like welfare or financial help. We always bring it up in our workshops, but I think that's what's told to them by their family or friends before they get here."

- No experience with entrepreneurship as an economic vehicle to self-sufficiency. Some respondents mentioned that, aside from receiving entitlements from the government, Samoans tended to have a subsistence economy. Because of this, entrepreneurship was not as valued in American Samoan society as it is in Hawaii, or the mainland, or Asia.

  Selected comments:

  "Samoa and Micronesia really haven't had a viable economy. It was a subsistence economy at best, on a village basis. So when you come here and the need is to earn income, what background do you have in that? I mean (if you're used to making a living by planting or raising animals) you have neither at KPT. I think there is an enormous cultural gap between expectations in capitalism and free enterprise and what they've known in a very controlled cultural context where they've basically been subsistence farmers or government dependents."

  "I've experienced micro-enterprising programs and working with other residents trying to start their own businesses. There are a couple of manapua wagons but they just see it as another source of income (rather than an opportunity toward self-sufficiency)."

- Kuhio Park Terrace has become a multi-generation substitute for village life. Because of the expectations related to a life of government entitlements (i.e., no appealing incentives to leave), generations of residents --- particularly Samoans --- have been raised, grown up and are raising their own families at KPT. Generations of families living there and graduating from Linapuni School have adopted this area as their village, containing their contemporary history and heritage. The concept of KPT as a temporary home from which they need to transition out has been lost over time and ---- barring any significant changes --- will continue to weaken for generations to come.

Selected comments:

"A lot of our Samoan families have lived here for generations and they continue from one generation to the next. They don't see that the goal for them was to actually not be here after a certain amount of time but she didn't see it that way. It's a way of life for them, period."

"It's home already. Some of them have been here 30-40 years. Some of the kids, they grow up looking forward to getting their own units. It's like they were born and raised here so that seems to be the natural trend."

"We have people who have been here since the 1960s and their families are here. So I wouldn't be amazed if I couldn't put together 10 to 20 families that make up that population."

- No connection with Hawaii as home. Despite the propensity toward creating the familiar village and long residency at KPT, providers said that these families remain culturally isolated from mainstream society in Hawaii.

Selected comments:

"In my mind, Samoan families in particular react to life in Hawaii more like tourist than permanent residents, because they all have a home to go back to, whereas most immigrants coming here don't have a place. There was a large migration back from Auckland, New Zealand to Samoa when the economy in New Zealand went down. So they invest in structures and programs and maintenance more like tourists do at a hotel than having a long-term interest in living in Hawaii. That makes them of a very different mindset."

"Being here, the youth are isolated; they have no real connection with the larger community."

SPECIFIC OBSTACLES

Substance abuse. This was an issue that was mentioned but not readily acknowledged by most service providers. Again, this was cited as the result of cultural isolation and uncertainty about how to cope with perceived lack of economic opportunities.

Selected comments:

"There's a substance abuse problem at KPT. It's not so open-door; a lot of it is displaced inside the unit. That's one of the major barriers from young families in particular to becoming self-sufficient."

"Substance abuse problems. Because of this, there are a lot of complaints from people not being able to pay rent, domestic violence and everything else just comes with it. We deal with that on a daily basis."

Communication/Lack of English-speaking skills. Lack of English-speaking skills tends to reinforce the cultural isolation discussed in the previous section. Several providers felt that this was the first and biggest hurdle that residents must overcome before addressing other life issues. According to one provider, a certain amount of freedom results from becoming a more fluent English speaker: *"Once you break down the barrier of communications then a person can allow their own human identity to shine through."*

Selected comments:

"The number one barrier is language. In our training, we used to try to accommodate non-English speakers but we stopped because employers won't be speaking their language; this was the biggest hurdle. Teaching English in a short time is impossible."

"The primary issue is literacy; not being able to communicate in English. A lot of employers require it, so it's the first hurdle. By and large, if they don't have the English skills then they can't venture out beyond the unit."

"Not just speaking but writing, filling out a job application. It's evident by our housing applications, you can determine whether the person has the ability to read and write. You can even tell whether or not they wrote in the application themselves. Reading, writing, speaking English is a problem."

"Kalihi has always been a changing community. At one point there were 70 families that were Korean at KPT and they couldn't call the police because the police didn't have anybody that could speak Korean. I've always been struck by the simplest kinds of things that don't get cited as a very basic need --- one is just the ability to communicate. So we don't have PTAs in the schools because there's no way that parents feel like they can adequately communicate with the school."

Lack of education / job skills. Providers said that because many residents have never had to work in their native cultures, they do not have the education or the skills necessary to land a job.

Selected comments:

"Lack of education and lack of skills, especially in the admin side where computer skills are warranted in most jobs now."

"A lot of them just have never worked before."

"Issues such as not knowing the norms of how to sell yourself when you go into an interview of have a job --- showing up on time, not calling work that morning and saying your child has a doctor's appointment that you knew about three months ago, things like that."

Childcare. Some providers said that there was some percentage of residents who said that not having childcare has hampered them from pursuing education or job skills training.

Selected comments:

"We have a lot of single parents, so childcare is a big problem area."

"There seem s to be a high reluctance among young folks to give up their children to other folks to watch. It seems like there's something going on, that's what they're saying."

TOP THREE MOST IMPORTANT NEEDS

Providers were given a list of possible needs of low-income families, then were asked to rate each need according to a 5-point scale, with 5 meaning "extremely important" and 1 meaning "not at all important" (9 = don't know or refused). From this list of needs, providers were asked to name the top three areas.

From among the top three most important needs, *substance abuse treatment programs, youth programs* and *job training* emerged as the most important, with three mentions each. This was followed by *child development/childcare* and *health issues* --- mental health, medical and dental care --- with two mentions each. *Cultural assimilation, family support, domestic violence programs* and *elderly services* each received one mention.

COMPATIBILITY WITH RESIDENTS' PERSPECTIVE OF NEEDS

Service providers were asked, "Does your opinion regarding the residents' most pressing needs greatly differ, somewhat differ or is it the same as the opinion of the KPT residents themselves?" Most responded that their opinions would somewhat differ from residents, since their perceptions are of the overall population and are often more objective than the residents themselves.

Selected comments:

"I think KPT residents have been interviewed so many times, they try to figure out what the interviewer wants to hear. People are test-wise. If I want to know anything, I ask the resident staff; otherwise I have no way of knowing."

"I know what the eviction rates and causes are and why people are getting into trouble on the premises. Some of those are denied by parents but it's pretty evident when we sit down and discuss it. Even though they don't say it, we know. So when a tenant says, 'We need a decent place to live,' sometimes it's an excuse or a copout to get away from the real issue. Perhaps

having a substance abuse problem or a domestic situation that you don't want to be in. So if you look at it from a management point of view you'll see a totally different picture."

"When you talk to them individually, they would be thinking of their personal needs. They're not going to say, 'Yes I have a drug problem and I need help.'"

Providers were asked, "In your opinion, which programs/services are most effective in addressing the issues you mentioned? Please be specific." Because of their varying interests, providers tended to favor areas that they themselves were covering. However, some common themes emerged:

Job training. Since lack of job skills was seen as a major barrier, many providers said that some amount of training consistent with their interests would help residents on the way to self-sufficiency.

Selected comments:

"Employment readiness --- we've had it for three years now, 12 sessions for 4 weeks, and we bring in 8 different speakers, aside from providers – people from Honolulu Community College, Salvation Army, UH, public health nurse, and others in the community."

"There was a program that used to operate by the airport on Ohohia Street. And it was like a business learning center. They would teach people things as simple as phone etiquette and answering the phone."

"Where I saw an improvement was when I began to offer educational programs --- warehousemanship, inventory control, inventory management, that seemed to change the dynamics and the individual wanted to be there and learn something new."

"We focus on those with little or no education or working skills. We help them define their goals with a core program --- that includes life skills --- attitudes, goal setting, dealing with peer pressure; economic literacy --- money management, saving money; and job training --- how to put together a resume, practice interviews, dressing for success. And we partner with private entities to give them a 12-week course in specialized areas."

Child development programs. These programs were favored by those providers who said it would be easier to wean younger children off a life of dependence than trying to change the ways of adults.

Selected comments:

"The program that's going to be effective in the long run, if given a chance, is the Head Start Program, because it's targeting the youth. I believe that if you target this age group and you provide the support system, hopefully they won't be here. Hopefully they'll move on with their lives after school."

"Early Head Start, from prenatal to age 3, which has a home-based component, we have someone work with the parents at home, discuss child development issues, make sure they have their immunizations. Head Start, which is center-based."

English as a Second Language (ESL) courses. Another agency said ESL classes were effective because they dealt with the most basic need to understand and be understood.

Selected comments:

"ESL classes have the best results, because up until that point, they have their fears that they can't communicate, they're struggling and not familiar with our culture."

Cultural sensitivity/awareness events. One agency said that community events --- particularly those with cultural themes --- are well attended at KPT. This gives residents a way to get to know each other's cultures and connect on a human level.

Selected comments:

"We identify natural leaders (in every ethnic group) and give them opportunities to become role models. It's not just understanding one group; it's the different groups not understanding each other. So we have community celebrations and we're going back to cultural themes to emphasize cultural pride, build on their assets, find common ground --- for most of them that common ground is parenting or looking for jobs."

Empowerment activities/ Leadership Development programs. Some providers said programs that give residents a taste of what it means to be involved in the community are most effective. Rather than telling people what they can do, residents are given the opportunities to participate in the community and increase their self-confidence.

Selected comments:

"We have a Community Technology Leaders program where we will hire a KPT resident between 15 and 21 years old to help monitor the computer labs at the Family Center and Teen Program to help teach computer skills to community residents, and help develop a community newsletter or web page."

"Classroom involvement for the parents, starting by assisting the teacher, starting as teachers' aides and if they want they can get certified. Eventually they may want to participate in policy committees where they have input in the curriculum, hiring and firing staff. That helps them gain more confidence in being involved in the community and their children's education."

12-Step programs. This was seen as an effective program by one agency, which had witnessed positive results in the past. According to agency representatives, the biggest challenge for this program is logistics.

Selected comments:

"Drug elimination --- 12-step programs are very effective, but they don't want to do it in their own neighborhoods. It worked best when we had an outreach worker from Salvation Army who blended in well with the community and was able to get them to go to the meetings offsite. However, they ran out of funds."

Providers were asked, "Are there any programs or services that you consider ineffective in addressing the issues you mentioned?" Understandably, most providers were reluctant to answer this question. However, at least two providers agreed that entrepreneurship programs had limited success in this population.

Entrepreneurship programs. Several providers said that, for this population, entrepreneurship programs appeared to have had very little success as a means toward self-sufficiency.

Selected comments:

"You've got people that don't come from a capitalist society. It's more socialist. Some agencies have entrepreneurship programs because that's where the money is. There's a perception that there's a percentage of poor people who want to be entrepreneurs; that may be true in Chicago and they've shown that to be true among women in Colorado that are on welfare. I'm not sure it applies to KPT."

"I strongly feel in my heart that, even though it would be a nice thing to see someone succeed that way, I don't really feel that that's a viable option. I see folks that try and it hasn't been successful."

Programs that don't integrate cultural differences. According to one service provider, it's not enough to have a "cookie-cutter" program without considering how different cultural values affect learning.

Selected comments:

"Some of the programs we've used to teach ESL have failed because they simply have not been able to integrate people of various cultures into the learning experience. Our public schools here have always been at the bottom 10 or 15 schools in the state at the elementary level. And I know that it isn't that children are ignorant; we just haven't adapted to changing people, changing times and changing cultures."

Food programs. One provider said that simply giving residents food does not teach them any real values aside from getting a handout:

"Surplus food, I would say, doesn't really make a difference. It's like a band aid for not budgeting wisely."

Agencies that chase "fads". One provider said that some agencies lack specific boundaries around their work, and sometimes chase projects for which they may not necessarily be best qualified.

Selected comments:

"Starting in the '80s, agencies started to chase funding rather than have a purpose for their organization. If you're a money-chasing group, you're always behind the curve because money is always going to be appropriated 5 years after the fact. For example, gang intervention or something like that, when the gangs have started to disappear already. These programs follow fads instead of perceived community needs that haven't been addressed over time."

Providers were asked, "What are the most pressing needs of the youth at KPT?" Responses were virtually unanimous in favor of activities --- anything to keep them busy or keep them "out of trouble."

Adult-involved activities. There was a consensus among providers that the youth at KPT needed adult-supervised activities in order to occupy their time productively after school.

Selected comments:

"Get the kids out. Broaden their experience base. All the programs are interrelated --- we tie in activities (as incentives) with their performance in school, employment, giving them structure. We have sports, karate, study hall, a drop-in rec center, sailing, etc."

"Adult-involved activities for youth --- anything; it could be tiddlywinks, sports, watching videos, playing computer games. I was on the plane yesterday with someone who's the head of the big soccer thing, and I said never in my 32 years has there ever been a soccer team in Kalihi Valley. And almost all of these kids come from cultures where soccer is a very big sport."

Peer tutoring/mentoring. Several providers agreed that peer-to-peer communication was the most effective way to motivate young people to stay on track with their education and reinforce positive social behavior.

Selected comments:

"Get some college students involved. Hopefully colleges that do certification, say for substance abuse counseling, can come out and do a program with them and show them, 'I went to college.'"

"Change often happens through peers --- we can sit them down in the classroom and they'll say, 'That's nice, but so what?' What's going to keep them coming to class if there's something good on TV that night? What's really effective is getting someone in there who's done it, have a mentor come in and show them that they can do it too."

"What I've chosen to do is bring in interns between the ages of 18-22 and use them as role models because they're on an educational track themselves. They'll say to that student, 'Look, I've had a really difficult time (without education).' And in most cases they have. They can say, 'I'm doing it; you can stretch a little bit and do it too.' They're more likely to be more responsive to someone of that age than someone of my age group. They would see me as an authority figure and say, 'Yeah, we'll do it because we have to.' That's not the way I want them to be involved in the program. It's one thing to get people in the program; it's another to see if they'll last for 18 months. I want them to really want to be there; that makes it really easy."

Social skills. One provider said that exposing the youth to different social situations was one way to develop their social skills, which in turn would help them develop other relationships in mainstream society.

Selected comments:

"There are things we call 'KPT behavior' that might be acceptable here but are not okay outside. For example if we go to a restaurant or museum, they'll be touching things, or their language, the way they dress may not be appropriate."

This section discusses issues that emerged over the course of discussions with service providers, but may not have been part of the original discussion guide. These issues have the potential to affect the delivery of services to KPT residents, yet may be out of individual providers' jurisdiction. However, residents have become cynical about any type of fact-finding project or promises of improvement due to perceived inaction on their behalf.

Lack of funding for assessment and continuous case management. Several providers acknowledged that while accurate assessment at the beginning of any program would be ideal, as well as continuous follow-up through case management, they also agreed that no funding exists for this function.

Selected comments:

"I think what would really make a difference is assessment and case management, have one contact person for each family telling them, okay, you need childcare, you need to go here. But there's no funding for it."

"You really have to do an excellent assessment to find out what they're interested in doing. And make sure that their dreams are not too far where they can't reach them. The make-or-break stage is in the assessment."

"There's no structured program where schools can refer a child's family to or an alternative education center if kids are beginning to show signs that they need that kind of help."

Appropriate use of benefits and services. Opinions were split regarding access to services. Several providers agreed that services were readily available at KPT, but not everyone who was eligible was accessing these services. Some providers said one difficulty was helping residents navigate the bureaucracy that accompanies applying for services such as health insurance. This means that although services are available, the amount of paperwork is too much for residents to figure out on their own. Another viewpoint was that residents choose not to access services due to misuse of resources given to them.

Selected comments:

"The services are there but what's hard to get across to them is the amount of paperwork they have to fill out for things like QUEST or CHIP for kids."

"There is no housing project I know of that provides onsite services the way KPT does. They're just loaded with programs. Now whether he tenant wants to take advantage of the programs is a different story. If you listen to the residents and they say they need childcare, you have to ask, are they using childcare for the right reasons? Do they get money for childcare but spend it on drugs? They're either not using the program correctly or there are problems with the programs themselves."

Competition among non-profits. Some providers acknowledged that competition and "turf battles" continue to be an issue in providing services to residents. This has inhibited some agencies from pursuing more far-reaching partnerships.

Selected comments:

"What we've seen from other agencies is that if we were to start youth programs they'd be concerned about what we're doing on their turf, even though they usually don't get into the teens. There is conflict between the housing projects on youth programs. Other than late night basketball, we haven't had programs that involve all the Kalihi housing projects in the same league. There's a turf thing there."

Displacement of families as a result of HOPE VI. Some providers expressed concern that the plans for new development would accommodate fewer residents, adding to the already growing waiting list.

Selected comments:

"We have a long waiting list of people waiting for units and it's getting worse. With the new building we won't accommodate as many; we need to find a way to help people already on the list before it gets worse."

Loss of open space. One provider who works with the youth was concerned that plans would include less open space for much needed activities.

Selected comments:

"I'm concerned about the loss of open space for kids. I see other housing developments and they don't have the kinds of spaces that we do for basketball games and other activities."

APPENDIX

A NEEDS ASSESSMENT STUDY
FOR RESIDENTS OF KUHIO PARK TERRACE
PART II: RESIDENT SURVEY

DRAFT --- RESTRICTED FOR INTERNAL USE ONLY

Prepared exclusively for:

HOUSING AND COMMUNITY DEVELOPMENT CORPORATION OF HAWAII

May 2001

The Kuhio Park Terrace (KPT) housing complex consists of two apartments and several low-rise buildings and is home to approximately 614 families. This needs assessment study of KPT residents was conducted to assist the Housing and Community Development Corporation of Hawaii (HCDCH) in preparing its application to the U.S. Dept. of Housing and Urban Development (HUD) for HOPE VI funds to this housing complex. The Community and Supportive Services (CSS) component of the HOPE VI program encompasses activities designed to promote upward mobility, self-sufficiency and improved quality of life for the residents of the public housing project, including literacy training, job training, day care, transportation and economic development opportunities. This phase represents the second in a two-phase study, in which interviews were conducted with 205 KPT residents, regarding their perceived needs or interests. The first phase involved interviews with service providers on the same subject. Key survey findings were as follows:

By length of residency in Hawaii, the largest group consisted of lifetime residents (31%), followed by those who had lived in Hawaii between six to ten years (20%). By length residency at KPT, those who had lived there for less than five years were represented by almost the same percentage as those who had been there for 10 years or more (41% and 38, respectively). The smallest percentage consisted of those who had been there for between 5-10 years (20%). Given the cultural isolation mentioned by service providers in the first phase of this study, this split shows the potential for territorial disputes due to differences in perception between long-time residents --- who have come to see KPT as their homes --- and new arrivals, who may see KPT residency as a temporary situation.

Close to half (46%) of residents rely on TANF benefits as their primary source of income, and one in four (26%) rely on jobs as their primary sources of income. Females (51%) were most likely to report TANF benefits as their primary source of income compared to males (24%), as were those with children (52%) compared to those with no children (13%). Generally, the higher the level of education completed, the more likely residents were to report jobs as their primary source of income. These percentages ranged from 11% for those with less than a high school education to 31% for those with a high school diploma, to 40% for those with a college degree. Households with 3-4 people were least likely to report jobs as their primary sources of income (17%) compared to those with 1-2 people (31%) and 5 or more (38%).

The majority of residents (63%) were unemployed. Of the 71 respondents who were employed, about half (48%) were employed part-time and 44% were employed full-time. Business owners comprised 1% of respondents.

There were no statistically significant differences in job search or job training activities between those whose primary source of income was employment (17%) or welfare benefits (22%). This indicates a possible need for both pre- and post-employment counseling, in order to help families attain financial stability through employment. Those with a college degree were more likely (29%) to be involved in these activities than those whose highest level of education was high school (18%) or less (12%). This indicates a need to increase emphasis on encouraging those without college degrees to seek more training.

Unemployed residents said that the greatest obstacle to getting a job was childcare (34%), followed by lack of reading and writing skills (32%) and lack of a GED or high school diploma (32%). Among all respondents, 45% of the 435 children mentioned in the survey would require childcare. Ages ranged from infants to 15 years old, with the greatest needs among the infants to 5 year-old group. This could indicate that although childcare facilities exist at KPT, residents might be having difficulty accessing this service, either due to limitations in residents' time or knowledge of the process, due to shortage of capacity in the program. Unemployed respondents said that if they were working, 20% of respondents would have their children watch themselves or have an older sibling do so. The next options were family members, followed by institutional care through schools, A+ or preschools.

The majority of residents (60%) do not own a vehicle. Of the 83 respondents who said they owned a vehicle, 27% said they owned more than one. Among those who do not own a vehicle, their primary means of transportation was the bus (70%), followed by walking and catching a ride with a friend or relative (13%).

When asked about their most important needs, residents tended to mention immediate needs such as money (68% said this was most important), dental care (64%) and medical care (63%). Long-term needs identified by service providers were at the bottom of the list --- only 22% mentioned

substance abuse treatment programs, and 20% mentioned domestic abuse counseling as most important. There were significant differences in terms of most important needs by age categories. While money was the most important need across all age groups, those aged 50 years or older focused on immediate, fundamental needs such as medical care (65%) and transportation (58%). Those aged 35 to 49 years tended to be more interested in improving their economic situation, expressing the highest interest in computer training (61%), help with home purchase (59%) and job training (54%) compared to the other two groups. The needs of the youngest adult age group were more family-oriented, with childcare at the top of the list along with money (65%). This group also expressed the greatest interest in entering the job market, with high interest in computer training (55%) and job placement (51%).

In order to determine need gaps, needs were placed side by side with the services residents are currently receiving. The largest gap was in help with a home purchase (-41%), indicating a desire to become self-sufficient. This was followed by training needs --- in computers (-37%), for jobs (-31%) and entrepreneurship (-27%). The basic needs mentioned as most important represented the smallest need gaps --- -13% for dental care, -6% for medical care.

These ratings reflect providers' assessment that residents were not the best judges of their most important needs, favoring immediate needs (money) over addressing root causes (substance abuse, domestic abuse). This is also a reflection of residents' long history of being service consumers rather than decision-makers. The transition between consuming services to making life decisions requires ongoing case management, in order to modify deeply imbedded behavior.

Among the youth, residents agreed with service providers that what was most important was simply to involve them in activities (22%) to occupy their time productively. An additional 5% mentioned sports specifically as most important. Similarly, when respondents were asked what types of programs their families would like to see at KPT, the largest percentage (18%) cited sports or activities. For the youth, 17% mentioned childcare, indicating that there may be parents who are themselves under the age of 18. Job-related programs followed, with 15% mentioning structured computer training programs, and 12% mentioning job training or job placement. This was consistent with the percentages given for desired programs

for the family, with 12% citing job training or placement, and 8% mentioning computer training. For families, 9% mentioned senior or elderly care and activities.

By and large, respondents appeared not to be too concerned about welfare reform. While close to half (47%) strongly agreed that they would need to get a job and 40% strongly agreed that they will need job training, the majority (58%) strongly disagreed with the statement that they were currently in job training. For the last statement, there were no statistically significant differences between those who were employed (55%) and those who were unemployed (60%). Among those whose primary source of income was TANF, 35% strongly agreed that welfare reform has not affected their family and do not expect it to affect their families in the future. This indicates a serious lack of understanding — and an urgent need for education --- about the real-world impact of welfare reform.

Again, this reinforces the idea that residents perceive immediate needs as the most important, while relegating long-term needs as less important, regardless of the real world impact on themselves or their families. Thus, although residents express desires for items such as education and having their own homes, it appears that they need more support in understanding how addressing deep-seated problems such as substance abuse (mentioned as a great need by service providers in the previous study) will help them to achieve these goals.

OBJECTIVE

This needs assessment study of Kuhio Park Terrace (KPT) residents was conducted to assist the Housing and Community Development Corporation of Hawaii (HCDCH) in preparing its application to the U.S. Dept. of Housing and Urban Development (HUD) for HOPE VI funds to modernize Kuhio Park Terrace. The Community and Supportive Services (CSS) component of the HOPE VI program encompasses activities designed to promote upward mobility, self-sufficiency and improved quality of life for the residents of the public housing project, including literacy training, job training, day care, transportation and economic development opportunities. Specific areas addressed include:

- demographic profile of residents and their family
- financial assistance
- education
- access to transportation
- most important needs
- services received
- impact of welfare reform

METHODOLOGY

To accomplish the goals stated above, a questionnaire was designed to collect data on the topics stated above. The questionnaire was designed by MTP and submitted to the client for review and approval. The survey was pre-tested to ensure that it flowed smoothly and was easily understood by both the respondent and the interviewer. The survey instrument is included in the Appendix section of this report. Each interview lasted an average of 10 minutes. All interviews were conducted by trained MTP staff in-person at KPT, from May 7-10, 2001, from 10 a.m. to 7 p.m. A total of 205 surveys were completed, resulting in a response rate of 34%. Data processing was performed using SPSSWIN, an in-house statistical software program.

SURVEY FINDINGS

Exhibit 2: Demographic Profile of Respondents

Respondents' age		Highest Level of Education Completed	
18 < 35 years	40%	Less than high school	32%
35 < 50 years	36	GED	5
50+ years	21	High school	33
Refused	2	Trade school	3
Median	38.22 years	Some college	17
Mean	39.16 years	College/Post-grad	6
Ethnicity (multiple response, % of total		**Years in HI**	
American Samoan	34%	Less than one	3%
Hawaiian/Part-Hawn	28	One to five	11
Micronesian	15	Six to 10	20
Chinese	13	11 to 20	14
Western Samoan	11	20+, not lifetime	17
Caucasian	10	Lifetime	31
Filipino	9	Refused	4
Portuguese	5		
Hispanic	3	**Gender**	
Vietnamese	3	Male	16%
Japanese	3	Female	84
Other	10		

This table shows the demographic profile of the residents who participated in this study. It shows that the median age is 38.22 years, while the mean is 39.16 years.

By ethnicity, the largest groups consist of American Samoans (34%), followed by Hawaiians/Part-Hawaiians (28%) and Micronesian (15%).

The highest level of education completed was a high school diploma (33%) followed closely by those who had less than a high school education (32%)

By residency in Hawaii, the largest group (31%) consisted of lifetime residents, followed by those who had been in the state for between six and 10 years (20%).

The majority of respondents were female (84%).

Exhibit 3: Household Profile

Years at KPT	
Less than five	41%
Five to ten	20
10 or more	38
Mean	8.39 years

Household size

$30K<$40K	2
DK/Refused	14
Median:	$7,333.33

Dependents:	
Seniors	15%
Children (21 years or younger)	85%

Children's ages	(n=435)
0<5 years	29%
5<10	28
10<15	25
15<18	11
18+	8
Mean:	2.12 children

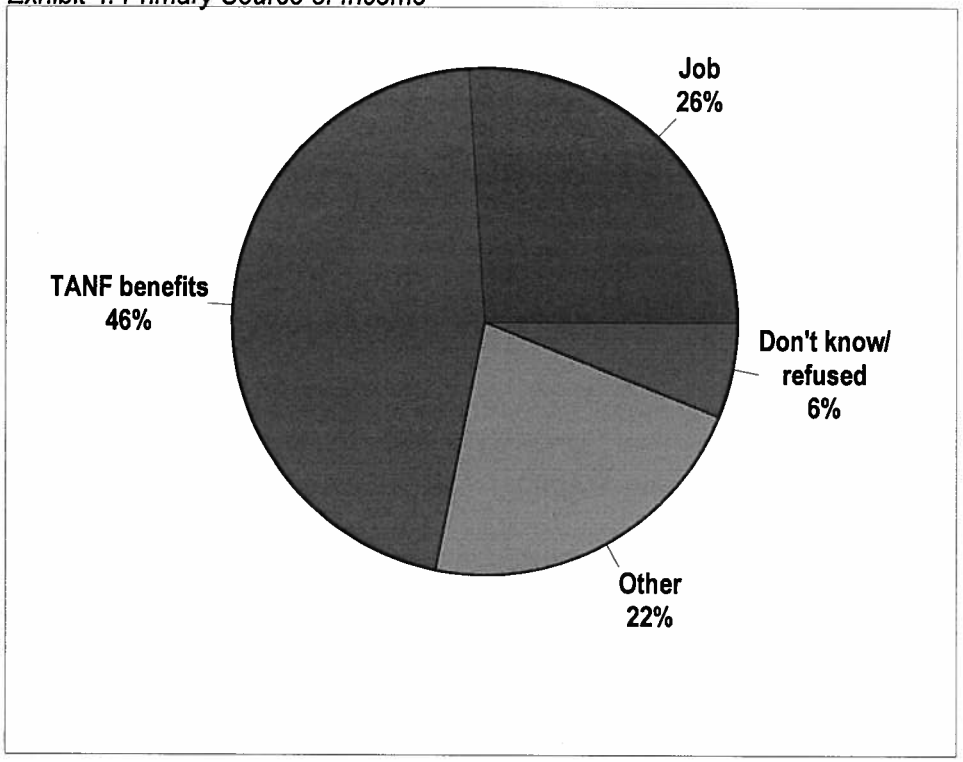
This table shows the household profile of those who participated in the study. By years at KPT, respondents were almost evenly split between those who had lived there for less than 5 years (41%) and those who had lived there for 10 years or more (38%).

The largest group of respondents had 3-4 people in their household. The majority (59%) reported an annual income of less than $10,000. The median income was at $7,333.33.

By dependents, about one in seven (15%) said there were seniors --- adults aged 62 years or older --- in their households. In contrast, the vast majority (85%) had children. These households had an average of 2.12 children.

Among the 435 children identified by respondents according to age, the majority (57%) was under the age of 10. The children's average age was 8.70 years.

Exhibit 4: Primary Source of Income



This chart illustrates residents' primary sources of income. Close to half (46%) rely on TANF benefits, while one in four (26%) rely on jobs as their primary sources of income.

Females were more likely to report that their primary income was from TANF benefits (51%) compared to males (24%). Those with children were significantly more likely to report TANF benefits as their primary source of income (52%) compared to those without children (13%).

Those with less than a high school education were least likely to have a job as their primary source of income (11%) compared to those who had completed a high school education (31%) or a college degree (40%). Similarly, those with a household size of 3-4 people were least likely to mention jobs as their primary sources of income (17%) compared to 1-2-person households (31%) and 5 or more (38%).

Exhibit 5: Type of Assistance Received

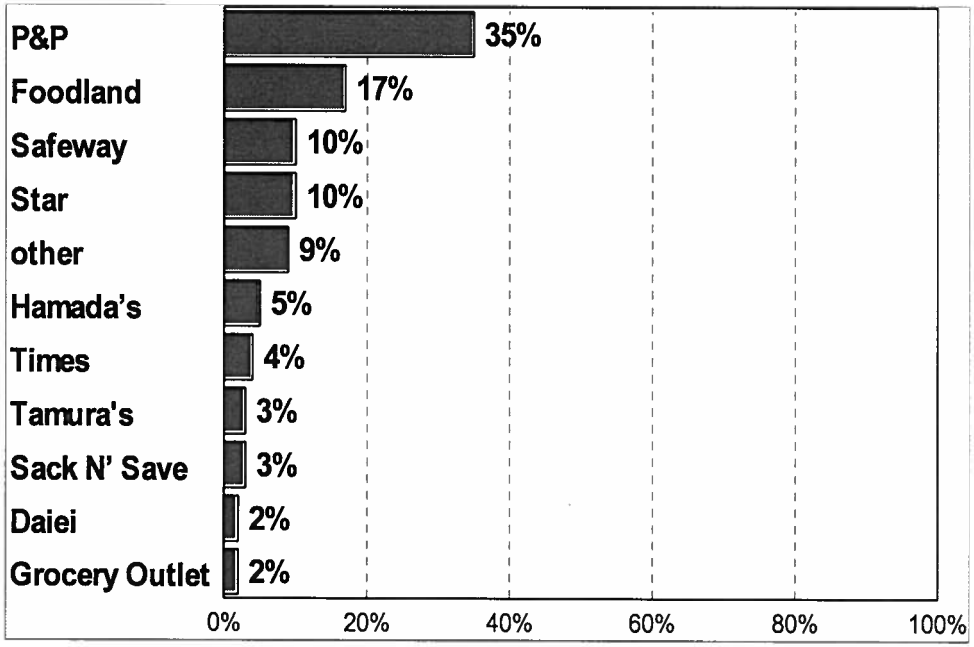
TANF + food stamps	44%
Food stamps/WIC	26
None	14
TANF benefits	9
Don't know/refused	7

Base: 205 respondents

Exhibit 4 shows that, among all respondents, the largest group (44%) received both TANF benefits and food stamps, followed by those who received only food stamps (26%). Another 9% receive only TANF benefits.

In addition, 14% said they receive no assistance and 7% said they either did not know or refused to disclose what type of assistance their families were receiving.

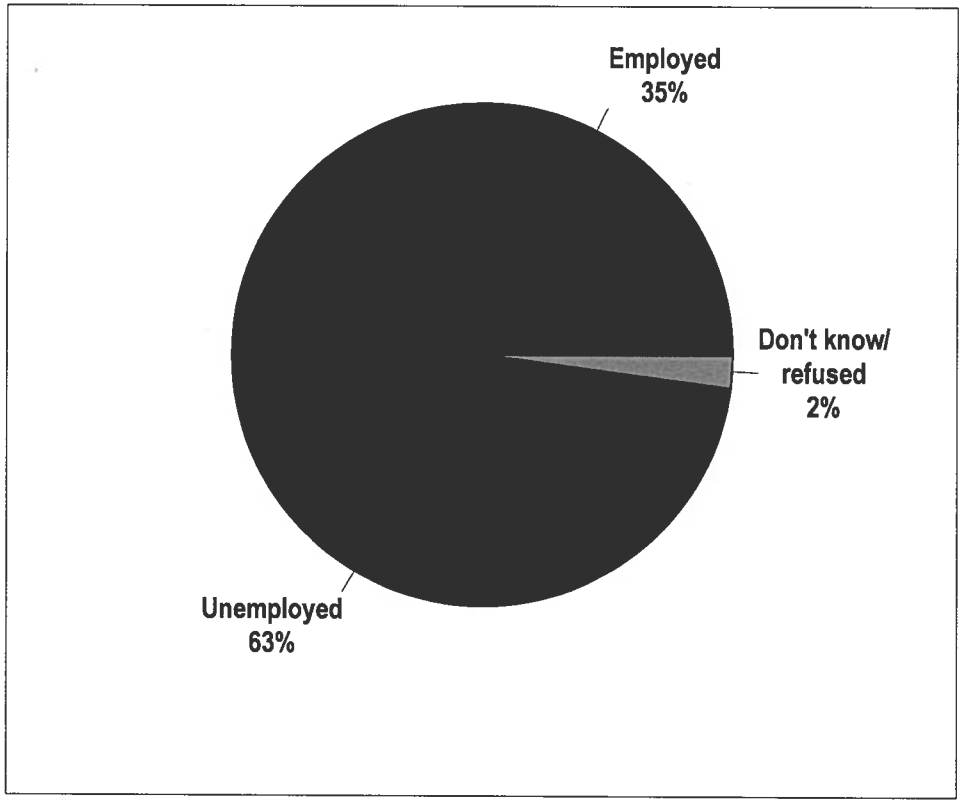
Exhibit 6: Purchase Most Groceries at ....



Base: 185 respondents, based on primary grocery store mentioned

The largest group of respondents said they purchased most of their groceries at P&P (35%), followed by major supermarket chains such as Foodland (17%), Safeway (10%) and Star (10%).

Exhibit 7: Employment Status



This chart shows that the majority of respondents (63%) were unemployed. One in three (35%) were employed.

There were no statistically significant differences across population segments, such as length of residency at KPT, household size, residency in Hawaii or whether the household had children or seniors.

Exhibit 8: Type of Employment

Full time	44%
Part-time	48
Business owner	1
Don't know/refused	7

Among the 71 respondents who were employed, close to half (48%) were part-timers, and 44% worked full-time. Only 1% consisted of business owners.

All respondents were asked, "Are you or anyone in your household involved in job search or job training activities?" The table below shows responses according to primary source of income, education, and whether they have children or seniors in their households.

Exhibit 9: Involvement in Job Search/Job Training Activities

by Source of Income	by Education	Children	Seniors
Job 17%	Less than High School 12%	With children 20%	With seniors 7%
TANF 22%	High School 18%	No children 10%	No seniors 20%
Other 14%	College 29%		

According to dependents, those with children were twice as likely (20%) than those with no children (10%) to be engaged in job search or job training activities. The reverse was true for those with seniors in their households --- only 7% for those with seniors and almost three times as much (20%) for those with no seniors at home.

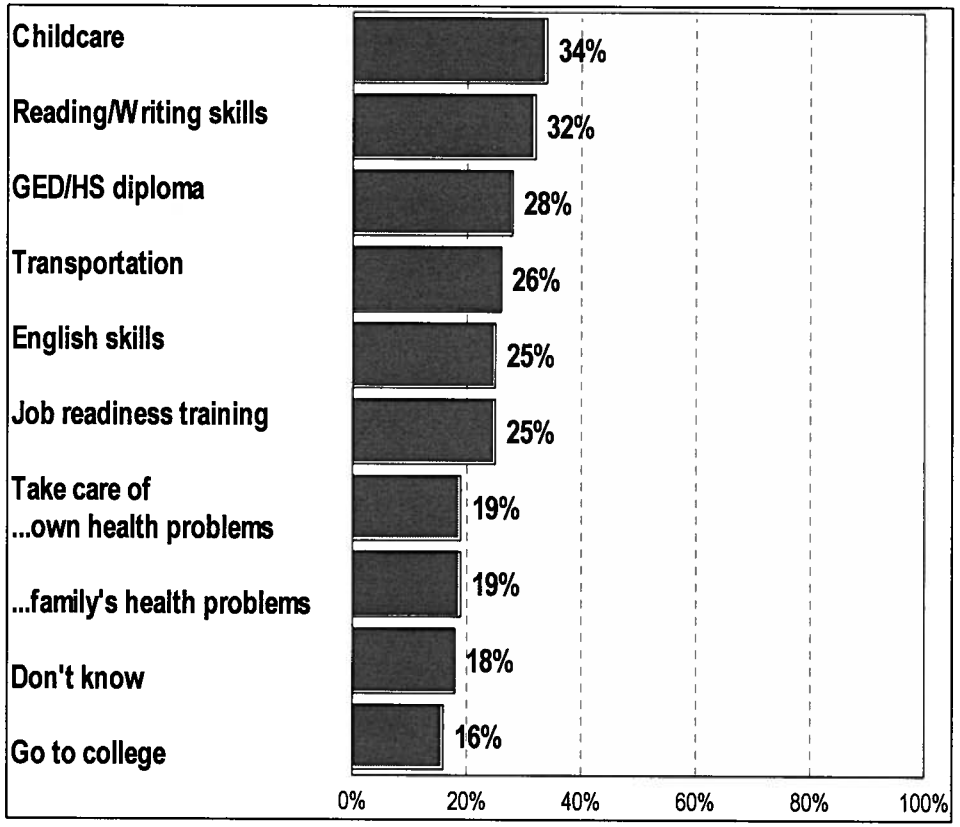
This table shows that there were statistically significant differences by education, and whether there were children or seniors in the home. However, there were no statistically significant differences by source of income.

By source of income, there were no statistically significant differences in job search or job training activities between those whose primary source was employment (17%) or welfare benefits (22%). This indicates a possible need for both pre- and ongoing post-employment counseling and support in order for families to attain some measure of financial stability.

By education, those who had completed a college education were more likely (29%) to be involved in these activities than those whose highest level of education was high school (18%) or less (12%).

Unemployed respondents were asked, "If you don't have a job now, but would like to have one, what are the three most important things you would need to get a job?" The chart below ranks responses according to number of total mentions.

Exhibit 10: Requirements in order to Get a Job



Base: 129 respondents; Totals may exceed 100% due to multiple responses

Exhibit 10 shows that, among the 129 respondents who were unemployed, childcare was mentioned most often was a requirement (34%) before they would get a job. The data indicates no statistically significant differences across different segments of the population.

Literacy and education were mentioned next, with about one in three (32%) saying that they needed to improve their reading and writing skills, 28% needing a GED or high school diploma.

About one in four (26%) said they needed transportation in order to get a job. A similar percentage (25%) said that they needed to improve their English skills and obtain more job readiness training.

Only one in seven (16%) said that they needed to go to college in order to get a job.

Exhibit 6 explores the childcare issue in greater depth by examining the profile of children at KPT. The profile of children by age was placed side by side with responses to the question, "If you were to work or enter a job training program, which of your children would need childcare?"

Exhibit 11: Childcare Needs

Children's ages	No. of children in age group	% of age group needing childcare
0<5 years	124	77%
5<10	122	48%
10<18	155	26%
18+	34	0

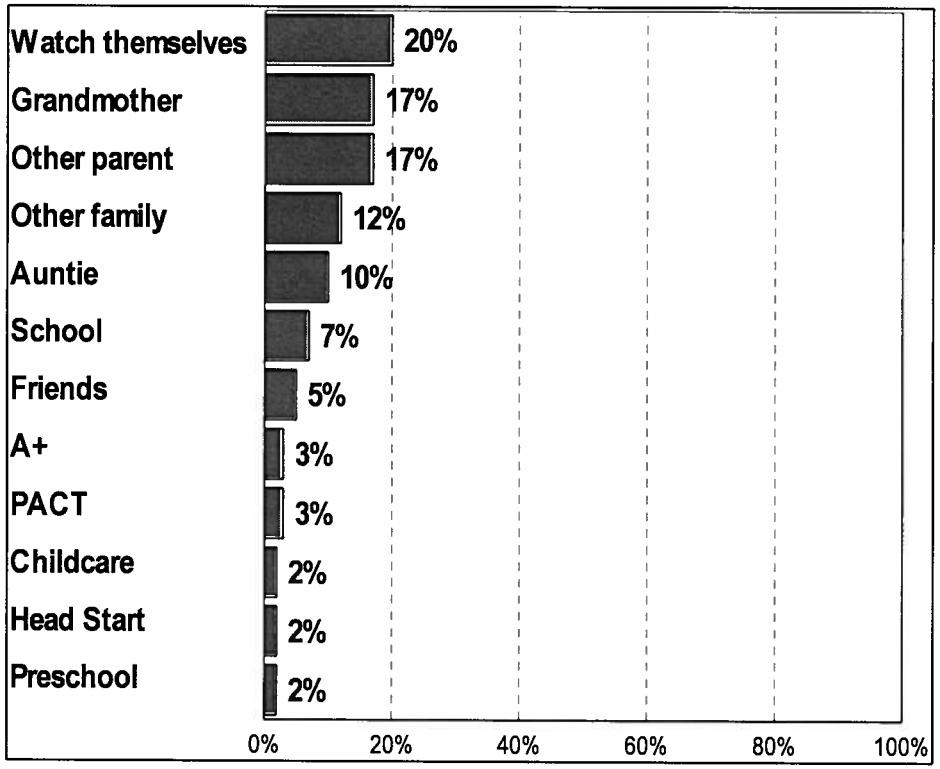
**Highest age cited as needing childcare was 15 years old.*

Taken all together, all, 45% of all children at KPT would require childcare if the respondent worked (194 children from a total of 435).

By age ranges, the data shows that the greatest need for childcare is among those aged 5 or under (77%). This indicates a possible need to increase capacity at existing childcare facilities. While it is understandable that the need for care declines as children increase in age, it is notable that childcare was perceived as a need for teens as old as 15 years old.

Respondents were asked, "If you were to go to work or enter a job training program, which of your children would need child care?" The chart below ranks responses according to number of total mentions.

Exhibit 12: Who Would Watch Children if Respondent was Working



Base: 59 responses

This chart shows that if respondents were working, one in five (20%) would be left on their own, or with their older siblings. One in six (17%) would be with the other parent or grandparents. One in ten (10%) would stay with their aunties.

Another 12% would be with unspecified family members, or family members other than those specifically mentioned.

Non-family options for childcare comprised less than 10% each, indicating a possible need for increased capacity in childcare programs.

Exhibit 13: Interest in School

Degrees obtained	%	Interest in school	%
High school	22	Respondent attending	6
GED	3	Household member in school	68
Trade school	1	Household member planning to attend	50
Some college	3	Household member interested in attending	60
College	2		

Schools attended by respondent (one response each)

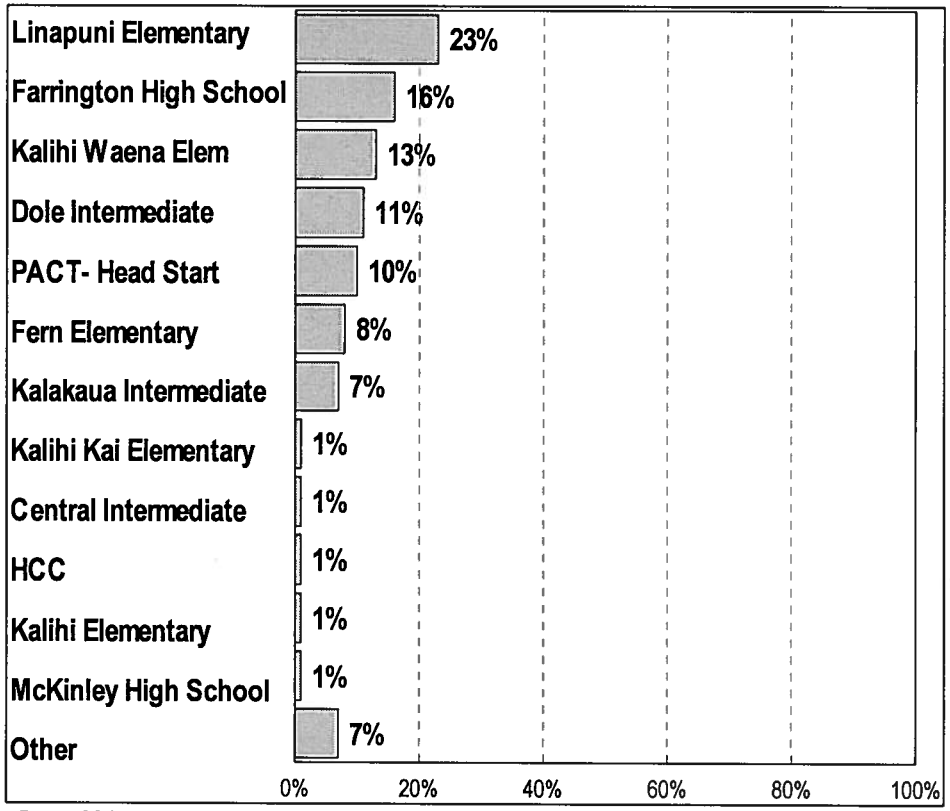
- Adult basic education B building
- Bible College
- Campbell
- Farrington High School
- Harcourt Learning Direct
- Hawaii Technology Institute - Alu Like
- Honolulu Community College
- Health resources
- KPT teaching program
- PACT (English class)
- Western Samoa

Exhibit 13 shows the highest levels of education completed by household members other than the respondent. The table shows that one in five (22%) completed high school as the highest level of education, and an addition 9% who had studied beyond that.

This was placed side by side with expressed interest in school. The majority (68%) said a household member was attending school. About half (50%) said someone in their household was planning to attend school, while 60% said they had a household member interested in attending school.

Among respondents, only 6% said they were attending school. The table at the bottom of the page shows which schools respondents attend. Each respondent named a different school.

Exhibit 14: School Attended by Family Members

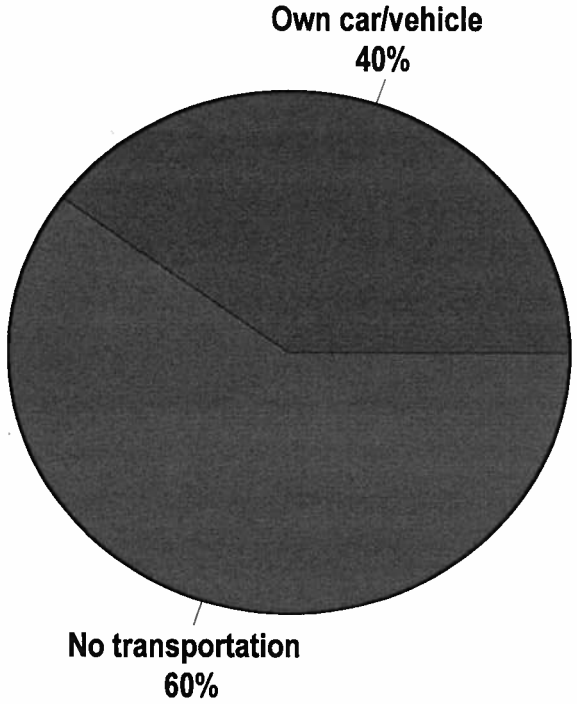


Base: 221 responses

Exhibit 14 shows the schools attended by respondents' family members. This shows that school was attended mostly by children and teens, with only 1% mentioning a post-high school facility (HCC).

The largest group of family members (23%) attends Linapuni Elementary, followed by Farrington High School (16%), Kalihi Waena Elementary (13%), Dole Intermediate (11%) and PACT-Head Start/Early Head Start programs (10%).

Exhibit 15: Access to Transportation



Primary mode of transportation for non-owners	
Bus	70%
Walking	13
Catch ride with friend or relative	13
Don't know/refused	3
Other	2

Exhibit 15 illustrates respondents' access to transportation. The majority (60%) said they had no transportation of their own, while 40% said they owned at least one car.

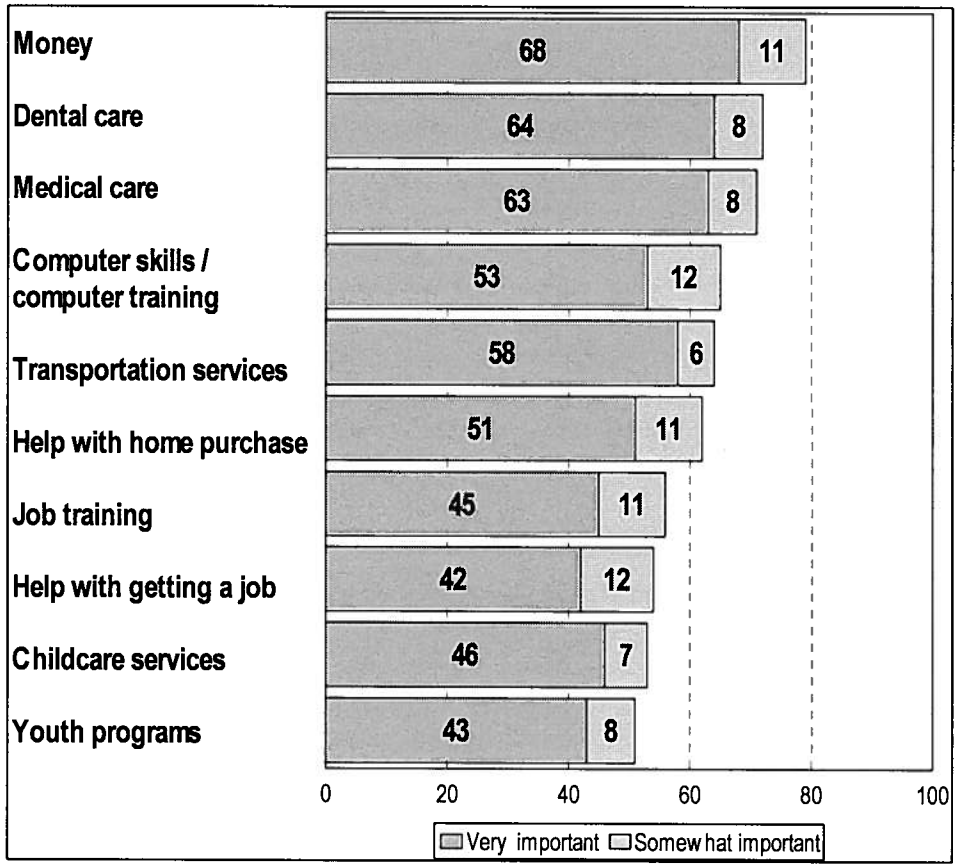
Those who were employed (61%) were more likely to own a vehicle than those who were unemployed (29%). Those who had children (44%) were also more likely to own a vehicle than those who had no children (16%).

Of the 83 respondents who said they owned a vehicle, 27% said they owned more than one vehicle.

Among those who said they did not own a vehicle, their primary means of transportation was the bus (70%). This was followed by walking and catching a ride with a friend or relative (13% each).

Respondents were given a list of needs, and asked to rate them on a scale of one to five, with 5 meaning, "this is very important right now" and 1 meaning "this is not at all important right now". Responses are ranked according to the percentages of those who rated the need as either 4 or 5.

Exhibit 16: Most Important Needs



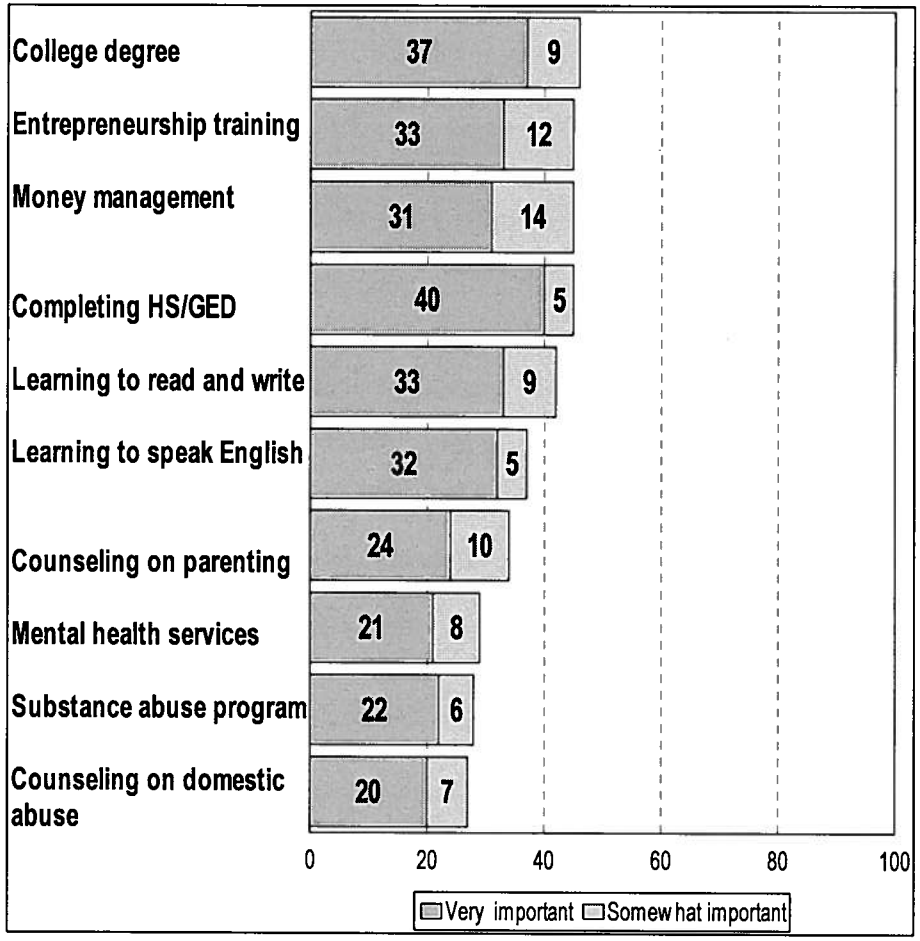
Base: 205 respondents

This chart shows the top 10 immediate needs, according to respondents. The most important immediate need (79%) was money, followed by dental (72%) and medial care (71%).

This was followed by computer skills/training (65%), transportation services (64%), help with home purchase (62%), job training (56%), job placement (54%), childcare services (53%) and youth programs (51%).

Taken together, these services reflect the needs of respondents for which programs already exist. This suggests possible gaps, either in terms of access or program capacity.

Exhibit 17: Other Needs



Base: 205 respondents

This chart shows how the rest of the elements were ranked. It shows that respondents gave the lowest ratings to domestic abuse counseling (27%), substance abuse treatment programs (28%), and mental health services needs that service providers saw as some of the most prominent.

These ratings, though contrary to what service providers indicated were important, were consistent with what providers expected respondents to say regarding their own needs.

This chart shows that differences among the most important needs were statistically significant among the different age groups. Highlighted are areas that were identified by the majority (more than 50%) as very important.

Exhibit 18: Most important Needs by Age

	Total	Age		
		18<35	35<50	50+
Money	**68%**	**65%**	**76%**	**65%**
Medical care	**63**	**59**	**69**	**65**
Transportation services	**58**	**55**	**59**	**58**
Computer training	**53**	**55**	**61**	37
Help with home purchase	**51**	48	**59**	44
Childcare services	46	**65**	49	7
Job training	45	47	**54**	28
Youth programs	43	46	49	30
Help with getting a job	42	**51**	45	26
College degree	37	37	46	26
Learning to read and write	33	29	39	30
Learning to speak English	32	28	41	30
Counseling on parenting	24	22	35	12
Substance abuse treatment	22	16	32	16
Mental health services	21	17	32	7
Domestic abuse counseling	20	24	20	12

Base: 205 respondents, 83 for 18<35, 74 for 35<50, 43 for 50+. Percentages reflect those who cited this need as "very important" (5 on a 5-point scale)

The needs of those 50 years and older were fundamental: money (65%), medical care (65%) and transportation (58%)

Aside from basic needs (money 76%, medical care (69%) and transportation 59%), the majority of those aged between 35 and 49 years old were more concerned about improving their economic situation --- this age group expressed the highest interest in computer training (61%), home purchase (59%) and job training (54%) compared to the other two groups.

The needs of the youngest group were more family-oriented. Childcare was the highest need (65%), tied with money. There was also concern about entering the job market, with 55% interested in computer training and 51% in job placement (help with getting a job).

In addition to the list cited in the previous pages, respondents were also asked, "Are you currently receiving assistance in the following areas?" Responses to these two questions were placed side by side --- ratings of 5 (very important) in the first question and "yes" responses to the second -- to show the need gaps, as perceived by respondents. The charts on the following pages show each need, ranked according to the size of the gap between importance and assistance received.

Exhibit 19: Largest Need Gaps

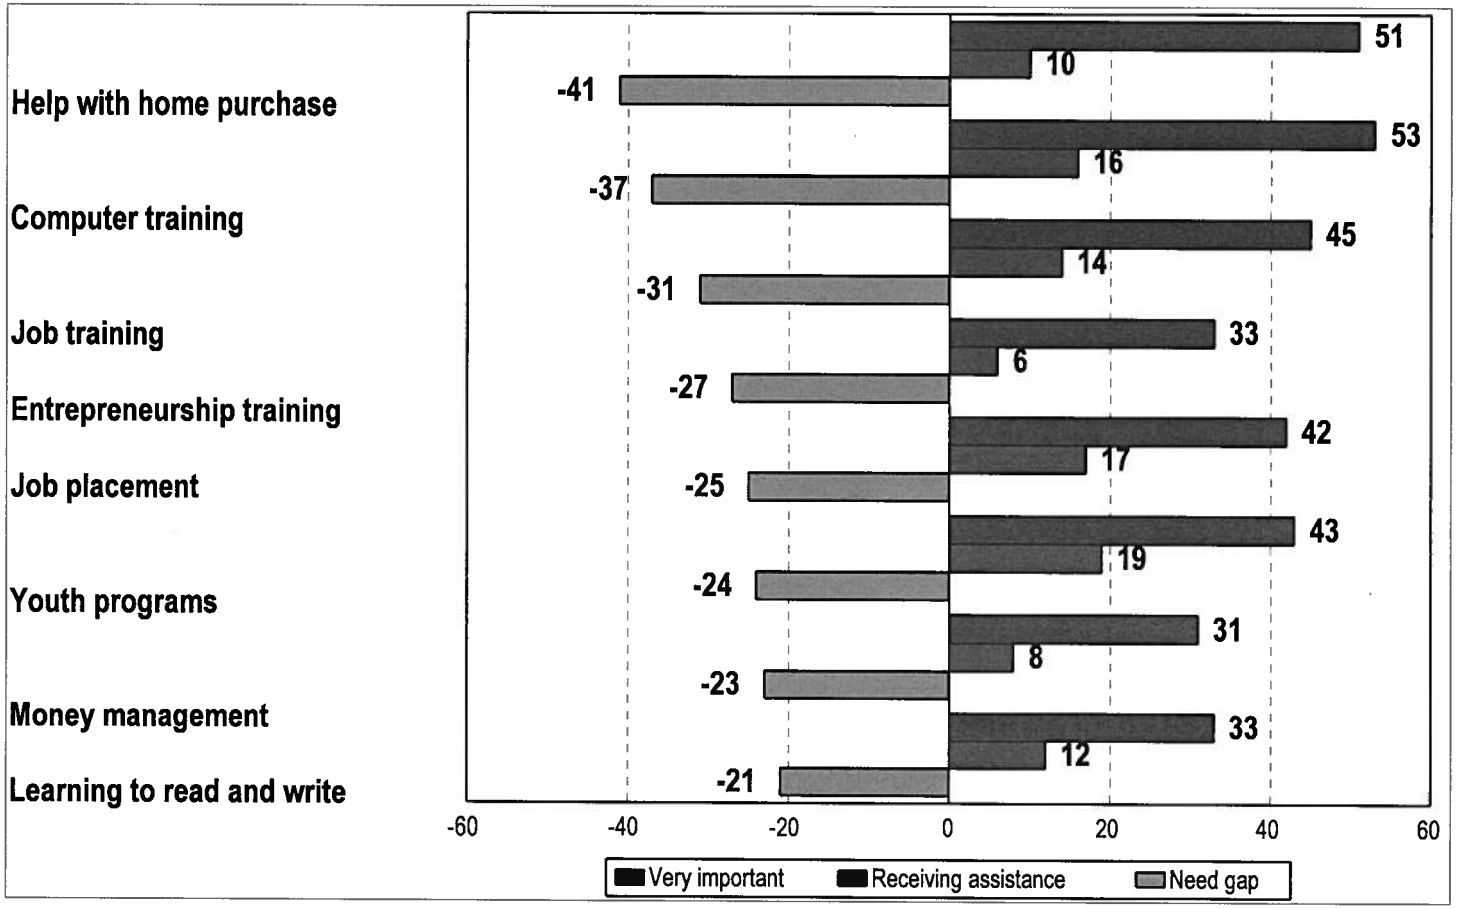


Exhibit 19 shows that, aside from helping with the purchase of a home (-41% gap between importance and assistance received) the biggest need gaps were related to jobs: training in computers (-37%), for jobs (-31%), for entrepreneurship (-27%), and help with job placement (-25%). These needs were followed by programs related to education: youth programs (-24%), money management (23%) and learning to read and write (-21%).

Exhibit 20 below shows other need gaps. It shows that, after learning to speak English (-19%), counseling was the next category --- on parenting (-17%), substance abuse (-15%) and domestic abuse (-14%). The lowest gaps were in healthcare --- dental (-13%), mental health (-8%) and medical care (-6%).

Exhibit 20: Other Need Gaps

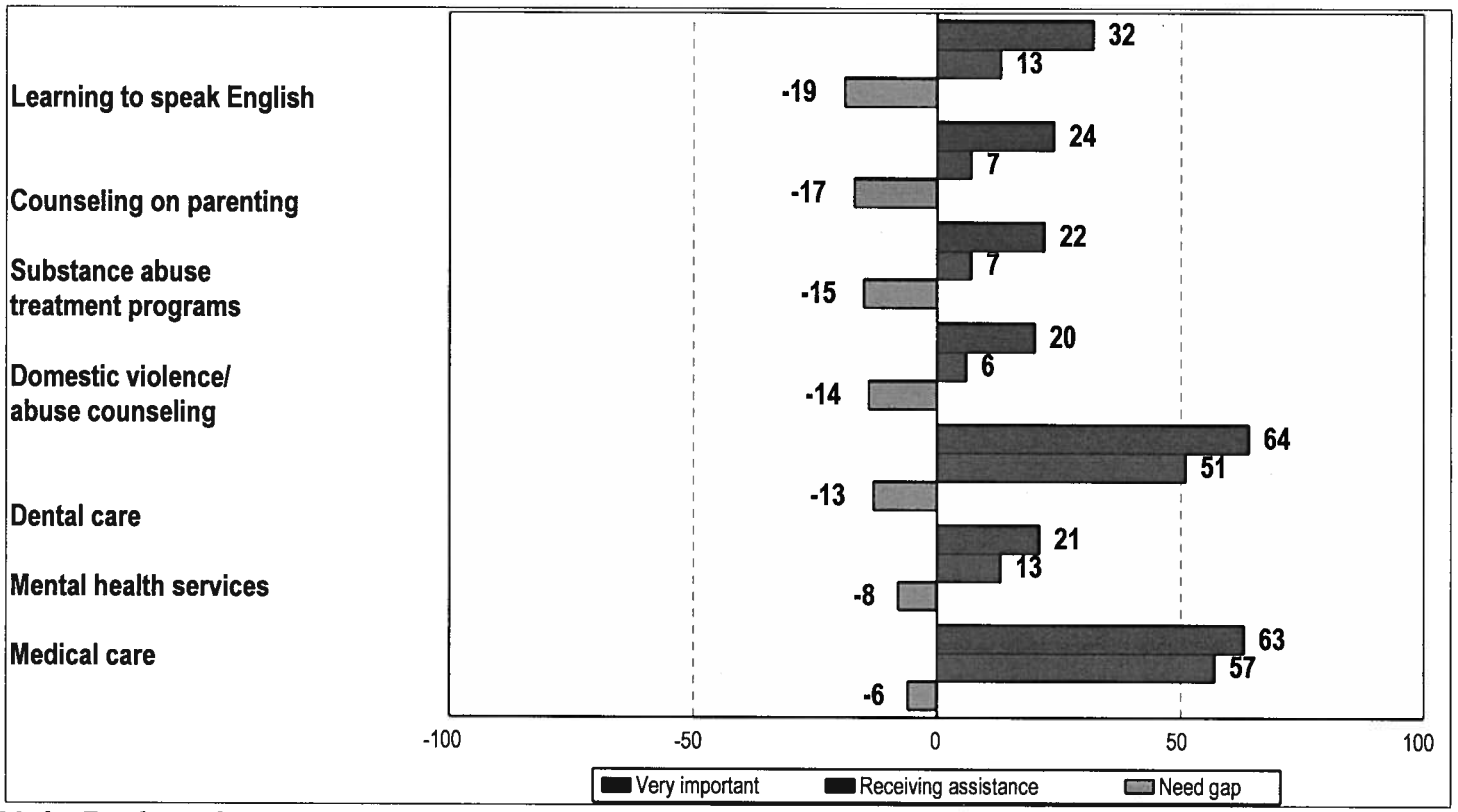

Exhibit 21: Need Gaps by Age Group

	Total	Age		
		18<35	35<50	50+
Help with home purchase	-41	**-41**	**-44**	**-35**
Computer training	-37	**-42**	**-46**	-14
Job training	-31	**-34**	**-38**	**-19**
Job placement	-25	**-34**	-26	-14
Youth programs	-24	-29	-25	**-16**
Learning to read and write	-21	-19	-25	-14
Learning to speak English	-19	-21	-23	-14
Counseling on parenting	-17	-12	**-27**	2
Substance abuse	-15	-9	**-24**	-9
Domestic violence/	-14	-19	-12	-7
Mental health services	-8	-5	-14	0
Medical care	-6	-1	-8	-14

This table shows that all three age groups reported help with home purchase as the largest gap (-41% for 18<35, -44% for 35<50, -35% for 50 or more).

For those under 50 years old, computer training represented the second largest gap (42% for 18<35, 46% for 35<50). The third largest gap was in job training (34% for 18<35, 38% for 35<50). This was the second largest gap for those 50 years old and over (19%).

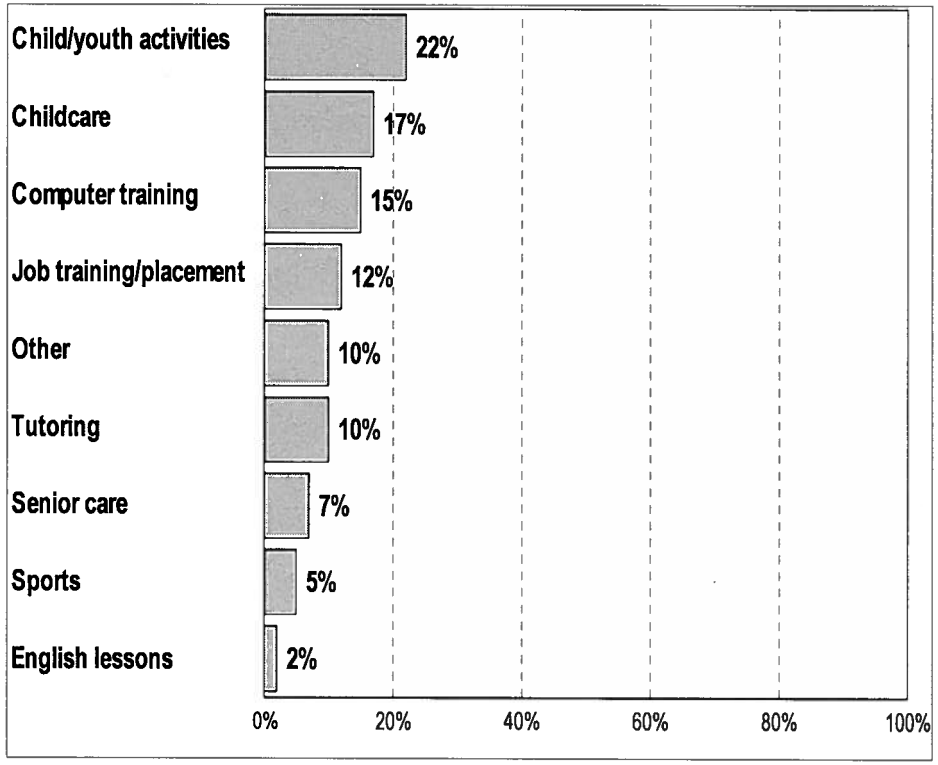
For those under 35 years old, this was tied with job placement (34%). This age group cited this as a significantly higher need than the other two groups.

Those aged 35<50 cited large gaps in substance abuse (24%), counseling on parenting (27%) and mental health services (14%) compared to the other two age groups.

The third largest need gap among those 50 years and older was in youth programs (-16%), which indicates the possibility that seniors may be currently involved in childcare.

Those who were living with youth between 16 years and 21 years old were asked, "What is most important to them? What programs and services do they need? Please be specific." The chart below represents responses given on an unaided basis.

Exhibit 22: Most Needed Youth Programs



Base: 41 responses

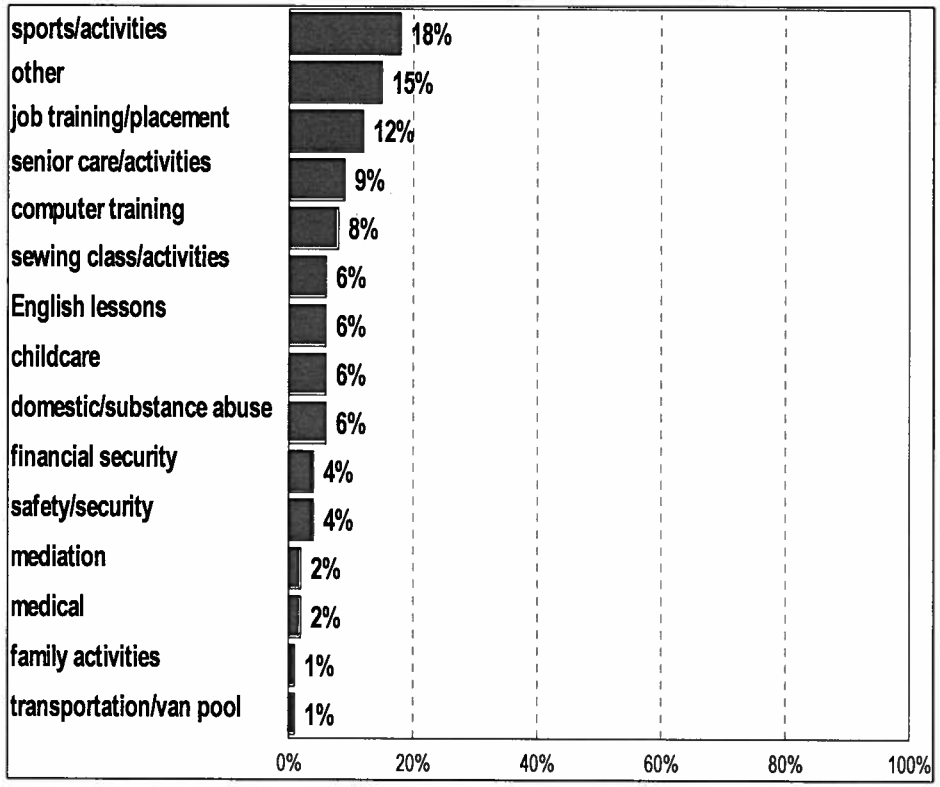
This chart shows that one in five (22%) residents with youth in their households mentioned activities most often as the greatest need. An additional 5% mentioned sports activities. This is consistent with the opinions of service providers, who said that keeping the youth occupied with positive activities was the greatest need.

Activities were followed by childcare (17%), reflecting the numbers of young families at KPT. Job-related programs followed, with 15% mentioning structured computer training programs, and 12% mentioning job training or job placement.

In terms of education, one in 10 (10%) said the youth needed tutoring, and one respondent mentioned English lessons.

All respondents were asked, "What types of programs and services would you like to see brought in to the Kuhio Park Terrace? What would help you and your family the most right now?" The chart below represents responses given on an unaided basis.

Exhibit 23: Most Needed Family Programs



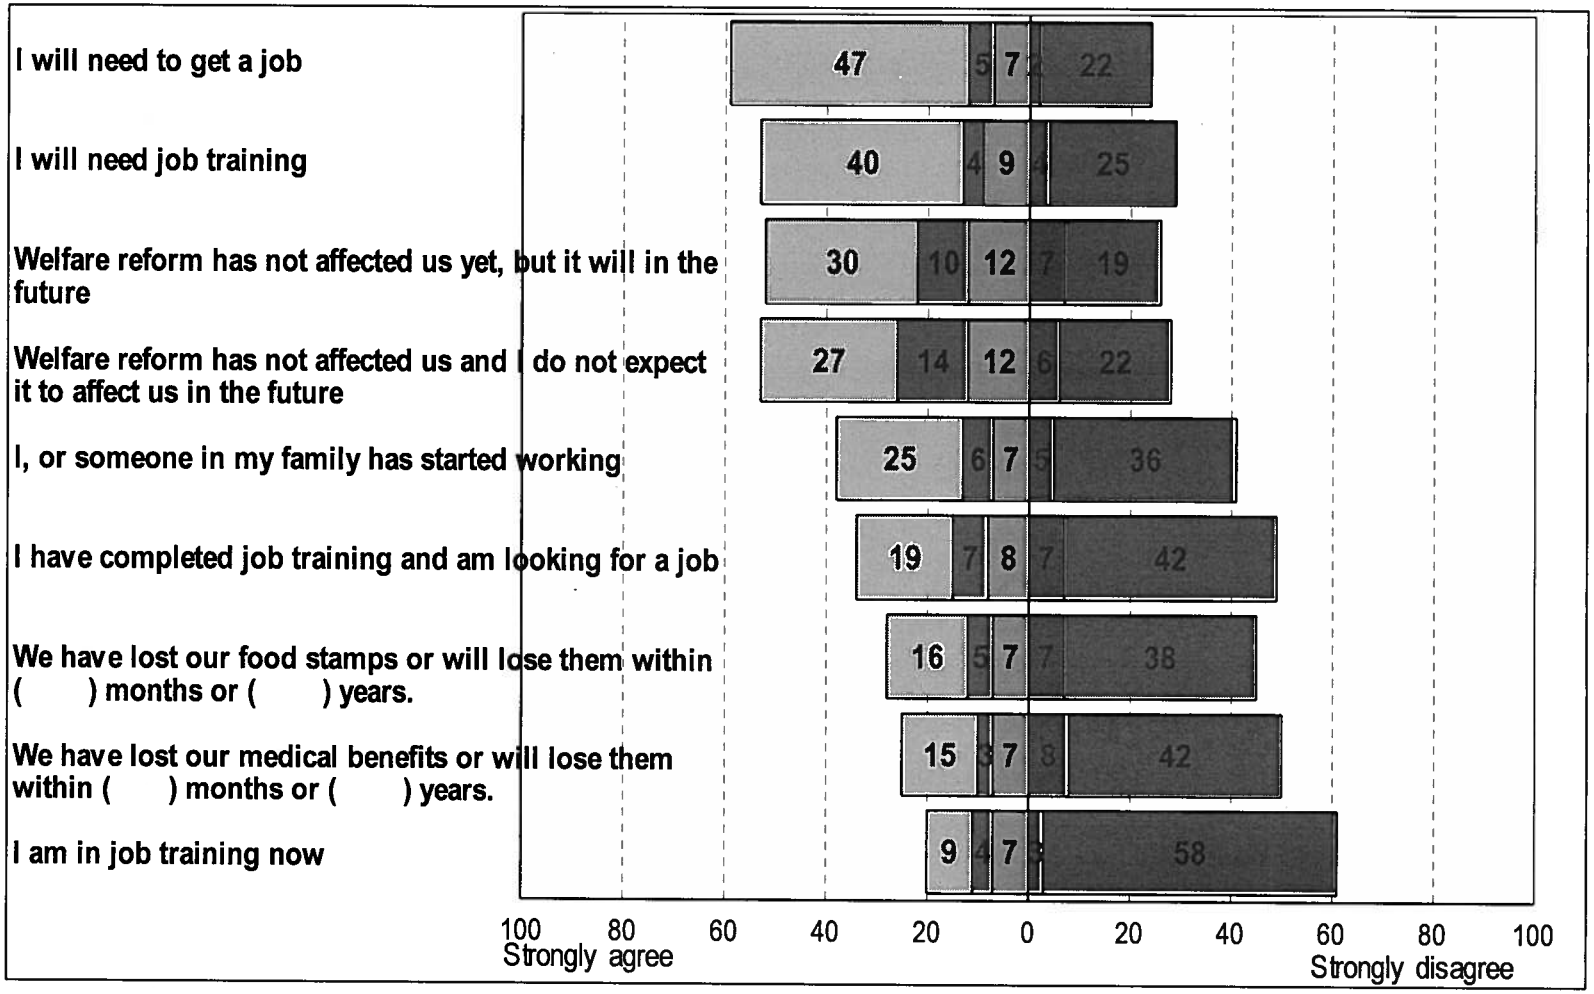
Base: 250 responses

This chart shows that, on an unaided basis, the most needed family program mentioned was sports or activities, consistent with the top program for youth. Job training was the next specific program mentioned (12%), followed by senior care and activities (9%), and computer training (8%).

Sewing activities were favored by 6%, along with English lessons, childcare and domestic or substance abuse treatment programs.

The 162 respondents who said they were receiving welfare benefits were given a set of statements describing the possible effects of welfare reform on their families. They were then asked to rate each statement on a five-point scale, with 5 equal to "strongly agree" and 1 equal to "strongly disagree". The chart below shows statements ranked according to average (mean) ratings.

Exhibit 24: Impact of Welfare Reform



By and large, respondents appeared not to be too concerned about welfare reform. While close to half (47%) strongly agreed that they would need to get a job and 40% strongly agreed that they will need job training, the majority (58%) strongly disagreed with the statement that they were currently in job training. For the last statement, there were no statistically significant differences between those who were employed (55%) and those who were unemployed (60%).

Among the 95 respondents whose primary source of income was TANF, 35% strongly agreed that welfare reform has not affected their family and do not expect it to affect their families in the future. Among the 90 respondents currently receiving TANF and food stamps, 40% strongly disagreed that they have either lost or will eventually lose their food stamps in the future. At best, this indicates that respondents were focusing on the immediate nature of the question (i.e., welfare reform has not affected their family or they have not lost food stamps). At worst, this indicates a serious lack of understanding about the real-world impact of welfare reform.

This reflects a need to educate all residents about welfare reform and manage their expectations about what they can do immediately to prepare themselves and their families for this inevitable future.
